1. **MATERIAL:** According to drawing specifications. The technical specifications of the first material and manufacturer must be included in the first order and whenever a change is made, accepting the material equivalence first. In case of injection, the material type acronym (PC, etc.) should be marked whenever possible.
2. Dimensions and tolerance according to the relevant drawing (reference and drawing edition in the purchase order). LAMP S.A.U. shall send the part drawing whenever a modification is applied, and edition shall be stated in the order.
3. For extrusion products, the profile bars shall be free of impacts, burrs, scratches, etc. and shall be packaged to avoid any damage to the product during subsequent transport or handling.
4. Injection parts shall be properly protected from scratches or impacts during transport using a separate bag and outer box.
5. In the case of a subsequent metal coating process, the supplier shall be advised to avoid dirt, grease, contact with the parts during the injection process. A recyclable or reusable bag or reusable paper should also be used to prevent the piece from coming into contact with moisture and dust.
6. The quantity delivered shall be the one ordered in the purchase order. Any modifications shall be consulted with the Procurement Department.
7. The material shall be identified by manufacturing date or batch.
8. The material that fails the relevant Quality inspections at LAMP S.A.U. shall be returned to the supplier.
9. Check destination before delivering the material.
10. Environmental requirements shall be taken into account, in order to minimise the generation of waste and CO2 emissions.
11. Suppliers shall ensure compliance with environmental regulations by accrediting the appropriate management of waste and providing proof thereof or by providing the company's ISO 14001 certification.
